Diagnostic Imaging Report

Examination: MRI - Brain without Contrast.

Date of Exam: Mar 17, 2016 05:20:00 PM.

Comparison: CT head 03/17/2016

Relevant Clinical Information: follow up possible stroke, abnormal ct aneurysm.

Contrast: None.

Sedation: None.

Discussion: MRI of the brain was obtained without contrast. The ventricles and CSF spaces are normal with no abnormal signal intensity identified. Diffusion imaging is normal with no evidence of acute infarction, mass lesion, hemorrhage, mass effect, or abnormal extraaxial fluid. The midline and craniocervical junction are unremarkable. There are good flow voids in the vessels and the sinuses are clear.

Ordering provider: Madhav Bhat, MD

Reading physician: Carla Brumbaugh, MD
