**Reason for Exam**

(MG Mammo Digital Screening Bilateral) Screening mammogram

**Radiology Report**

EXAMINATION: MG MAMMO SCREENING BILAT + TOMO

Date: 7/20/2022 1:18 PM

History: Female, 69 years old. Screening mammogram

COMPARISON: February 10, 2020 and January 2, 2013

Technique: Routine screening 2D and 3D tomosynthesis were performed. CAD was utilized.

Density: The breast tissue is heterogeneously dense which could obscure small masses.

BILATERAL 2D and 3D SCREENING MAMMOGRAM FINDINGS: Benign bilateral breast calcifications. No suspicious calcifications or masses; no architectural distortion.

IMPRESSION: No mammographic evidence of malignancy. Annual screening mammograms along with monthly self-breast exams are recommended.

BI-RADS 2: Benign findings(s)

RECOMMENDATION: Annual screening mammography.

A letter is sent to the patient reporting the results of the exam.
