16-CT-25-0006689	6/17/2025 08:30 EDT	CT Abdomen and Pelvis w/ Contrast	Bangar MD,Siddharth	72 years

#### Reason for Exam

(CT Abdomen and Pelvis w/ Contrast) Abdominal pain

#### Radiology Report

EXAMINATION: CT ABDOMEN/PELVIS W/ CONTRAST

Date: 6/17/2025 8:30 AM

History: Female, 72 years old. Abdominal pain    Tech Notes: -- 75 ml isovue 370- Rectal bleeding x 1 day with cramping.

COMPARISON: None.

Technique: Routine CT of the abdomen and pelvis with intravenous contrast. One or more of these dose optimization techniques were utilized: Automated exposure control; mA and/or kV adjustment per patient size (includes targeted exams where dose is matched to clinical indication); or iterative reconstruction. Tech Notes: -- 75 ml isovue 370- Rectal bleeding x 1 day with cramping.

#### FINDINGS:

Chest: The visualized lung bases are clear. Small to moderate hiatal hernia

Heart: The heart size is normal.

Liver: Within normal limits without focal lesion

Gallbladder: Gallbladder is distended without findings of acute cholecystitis

Spleen: The spleen is within normal limits for age without focal lesion.

Pancreas: The pancreas is homogenous in enhancement without peripancreatic inflammatory stranding or free fluid to suggest acute pancreatitis.

Adrenals: The adrenals are within normal limits without focal lesion.

Right Kidney: Within normal limits without focal lesion or hydronephrosis.

Left Kidney: Within normal limits without focal lesion or hydronephrosis.

Small Bowel: There are no dilated loops of bowel or transition points to suggest bowel obstruction. There is no abnormal bowel wall thickening or enhancement to suggest enteritis.

Stomach: The stomach is within normal limits without convincing acute findings.

Appendix: The appendix is normal.

Colon: Normal stool burden. There is colonic wall thickening and inflammation involving the sigmoid colon suggestive of a nonspecific colitis. No findings of active bleeding within the limitations of a single phase study

Bladder: The bladder is collapsed and not well characterized.

Peritoneum: There is small volume abnormal but nonspecific simple appearing free pelvic fluid.

Lymph nodes: There are no pathologically enlarged lymph nodes by size criteria.

Vessels: Atherosclerotic calcifications within the aortoiliac system.

Bones: No acute osseous findings.

**Memorial Hospital**

**Name:** BERRY, VICKIE L  
**MRN:** 10502  
**Encounter:** 7622604

**Admit Date:** 6/17/2025  
**Discharge Date:** 6/17/2025  
**Attending:** Bangar MD,Siddharth

*Computed Tomography*

**Radiology Report**

Uterus: The uterus and adnexa are within normal limits for age and modality.

**IMPRESSION:**

1. Colonic wall thickening and inflammation involving the sigmoid colon suggestive of a nonspecific colitis. No findings of active bleeding within the limitations of a single phase study.
2. Small volume abnormal but nonspecific simple appearing free pelvic fluid.
