Acute Knee Pain, Adult

Acute Knee Pain, Adult

Many things can cause knee pain. Sometimes, knee pain is sudden (acute). It may be caused by damage, swelling, or irritation of the muscles and tissues that support your knee.

Pain may come from:

- A fall.
- An injury to the knee from twisting motions.
- A hit to the knee.
- Infection.

The pain often goes away on its own with time and rest. If the pain does not go away, tests may be done to find out what is causing the pain.

These may include:

- Imaging tests, such as an X-ray, MRI, CT scan, or ultrasound.
- Joint aspiration. In this test, fluid is removed from the knee and checked.
- Arthroscopy. In this test, a lighted tube is put in the knee and an image is shown on a screen.
- A biopsy. In this test, a health care provider will remove a small piece of tissue for testing.

Follow these instructions at home:

If you have a knee sleeve or brace that can be taken off:

- Wear the knee sleeve or brace as told by your provider. Take it off only if your provider says that you can.
- Check the skin around it every day. Tell your provider if you see problems.

- Loosen the knee sleeve or brace if your toes tingle, are numb, or turn cold and blue.
- Keep the knee sleeve or brace clean and dry.

Bathing

- If the knee sleeve or brace is not waterproof:
 - Do not let it get wet.
 - Cover it when you take a bath or shower. Use a cover that does not let any water in.

Managing pain, stiffness, and swelling

- If told, put ice on the area.
 - If you have a knee sleeve or brace that you can take off, remove it as told.
 - Put ice in a plastic bag.
 - Place a towel between your skin and the bag.
 - Leave the ice on for 20 minutes, 2–3 times a day.
- If your skin turns bright red, take off the ice right away to prevent skin damage. The risk of damage is higher if you cannot feel pain, heat, or cold.
- Move your toes often to reduce stiffness and swelling.
- Raise the injured area above the level of your heart while you are sitting or lying down. Use a pillow to support your foot as needed.
- If told, use an elastic bandage to put pressure (compression) on your injured knee. This may control swelling, give support, and help with discomfort.
- Sleep with a pillow under your knee.

Activity

- Rest your knee.
- Do not do things that cause pain or make pain worse.
- Do not stand or walk on your injured knee until you're told it's okay. Use crutches as told.
- Avoid activities where both feet leave the ground at the same time and put stress on the joints. Avoid running, jumping rope, and doing jumping jacks.
- Work with a physical therapist to make a safe exercise program if told. Physical therapy helps your knee move better and get stronger.

Exercise as told.

General instructions

- Take your medicines only as told by your provider.
- If you are overweight, work with your provider and an expert in healthy eating, called a dietitian, to set goals to lose weight. Being overweight can make your knee hurt more.
- Do not smoke, vape, or use products with nicotine or tobacco in them. If you need help quitting, talk with your provider.
- Return to normal activities when you are told. Ask what things are safe for you to do.
- Watch for any changes in your symptoms.
- Keep all follow-up visits. Your provider will check your healing and adjust treatments if needed.

Contact a health care provider if:

- The knee pain does not stop.
- The knee pain changes or gets worse.
- You have a fever along with knee pain.
- Your knee is red or feels warm when you touch it.
- Your knee gives out or locks up.

Get help right away if:

- Your knee swells and the swelling gets worse.
- You cannot move your knee.
- You have very bad knee pain that does not get better with medicine.

This information is not intended to replace advice given to you by your health care provider. Make sure you discuss any questions you have with your health care provider.

Chief Complaint

PT. comes in with c.o of R knee pain X2 weeks

History Of Present Illness:

71-year-old woman presents with mild to moderate pain to the medial aspect of her right knee, she does not recall any injuries or falls. No prior history of chronic pain. No calf pain. No thigh pain. No fever. No rash.

Review of Systems:

Denies other illnesses.

Physical Exam

Vitals & Measurements

T: 36.7 °C (Axillary) HR: 101 (Peripheral) RR: 18 BP: 118/96 SpO2: 99%
HT: 162.56 cm WT: 82.20 kg BMI: 31.11 Pain Score: 3 O2 Therapy: Room air
General: Alert and oriented, well nourished, No acute distress, Well appearing
Eye: PERRL, EOMI, Normal conjunctiva
HENT: Normocephalic, moist oral mucosa, No scleral icterus
Neck: Supple, non-tender, No JVD
Lungs: Non-labored respiration
Heart: Normal capillary refill
Abdomen: Non-distended
Musculoskeletal: Moves all extremities, Full range of motion of right knee with some pain.
Tenderness over the anterior medial aspect of right knee. No obvious effusion. Medial anterior aspect where patient is painful and tender there is some very light areas of ecchymosis and erythema.
Skin: Skin is warm, dry and pink
Neurologic: Awake, alert and oriented X4
Medical Decision Making:
MDM

Although not an exhaustive list of Differential Diagnosis: Contusion, arthritis, sprain, strain

ED Course: 71-year-old woman presents with mild to moderate pain to the medial aspect of her right knee, she does not recall any injuries or falls. No prior history of chronic pain. No calf pain. No thigh pain. No fever. No rash.

Knee x-ray with degenerative changes otherwise unremarkable. Patient states that Tylenol and ibuprofen will be sufficient for pain.

Prior external records reviewed: Previous outpatient records reviewed. Local pharmacy records reviewed. Inspect record reviewed.

The patient has received a medical screening examination: within reasonable clinical confidence has been stabilized in the ED.

Imaging: Interpretation by radiology and independently reviewed by me. X-ray images visualized. Agree with radiology report. Degenerative changes otherwise unremarkable.

Independent EKG interpretation:

Presenting clinical condition necessitates admission or observation consideration: No

Independent Hx provided by:

Med Rx considered but ultimately not given: Tramadol

Dx tests considered but ultimately not ordered: MRI of right knee

Social determinant that may affects healthcare:

Pt's case/impression summarized and discussed with:

Likely Dx given clinical picture: Right knee pain

Patient at time of discharge was clinically well-appearing and HDS for outpatient management. The patient and/or family was given the opportunity to ask questions prior to discharge, understood my verbal discussion of the plans for treatment, expected course, indications to return to ED, and the

need for timely follow up as directed.

Prescribed medications: None

Condition: Stable

Disposition: Discharge

Assessment/Plan

1. Right knee pain M25.561
2. Arthritis of knee, right M17.11
