8/20/25 8:15 AM	MRI Brain w/o Contrast	Packard, Bryanna;	Auth (Verified)

Notes:

(MRI Brain w/o Contrast) Reason For Exam: headache

REPORT

EXAMINATION: MRI BRAIN W/O CONTRAST

Date: 8/20/2025 7:38 AM

History: Female, 72 years old. headache

COMPARISON: CTA head and neck with contrast dated 8/20/2025, CTA of the head dated 7/28/2022, MRI of the brain without contrast dated 9/30/2020.

Technique: Non-contrast MRI imaging of the brain.

FINDINGS:

Brain parenchyma: No masses, midline shift; no hemorrhage or acute infarct.

Diffusion: Unremarkable; no acute stroke.

Atrophy: Stable age-related atrophy.

Microvascular: Stable mild microvascular changes.

Vessels: Unremarkable noncontrast appearance.

Extra-axial spaces: Normal for the patient's age.
Ventricles: No hydrocephalus; normal size for age.

Bones: Unremarkable calvarium and other visualized bony structures.
Sinuses and mastoids: Chronic appearing nonocclusive left maxillary sinus disease; otherwise clear.

Soft tissues and scalp: Unremarkable.
Orbits (visible): Unremarkable.

Additional comments: None.

IMPRESSION:

1. No evidence of acute intracranial abnormality.
2. Stable age-related atrophy and mild microvascular changes.
3. Chronic left maxillary sinus disease.

REPORT

EXAMINATION: CTA NECK, CTA HEAD

Date: 8/20/2025 8:04 AM

History: Female, 72 years old. Sharp pain on left side of face after yelling. History of a CVA 10 years ago.

COMPARISON: CTA head 7/20/2022, carotid ultrasound 9/30/2020.

Technique: Intravenous contrast was administered and imaging of the neck and head was obtained during the arterial phase of the contrast bolus. Two-dimensional and 3-D MIP images for post processing were performed and reviewed. Vessel analysis software was utilized to calculate the minor and major diameter measurements in areas of arterial stenosis. One or more of these dose optimization techniques were utilized: Automated exposure control; mA and/or kV adjustment per patient size (includes targeted exams where dose is matched to clinical indication); or iterative reconstruction. Contrast administered for exam: 100 mL of Isovue-370.

FINDINGS:

NECK CT:

Paranasal sinuses: There are air-fluid levels in the left maxillary sinus. The ethmoid air cells are well pneumatized. The sphenoid sinuses and frontal sinuses are clear.

Nasopharynx: Normal.

Oropharynx: Normal.

Prevertebral tissue: No swelling.

Salivary glands: Symmetric with normal size.

Cervical lymph nodes: No lymphadenopathy.

Thyroid gland: Normal.

Larynx/trachea: Normal.

Bones: No acute findings.

Lung apices: Unremarkable.

Additional comments: None.

CTA NECK:

AORTIC ARCH AND GREAT VESSELS:

Aortic arch morphology: Bovine.

Right brachiocephalic artery: Widely patent.

Right common carotid artery: Widely patent.

Left common carotid artery: Widely patent.

Left subclavian artery: Widely patent.

Right subclavian artery: Mild atherosclerotic disease, less than 50% stenosis.

VERTEBROBASILAR SYSTEM:

Right vertebral: Widely patent.

Left vertebral: Widely patent.

RIGHT CAROTID BIFURCATION:

Mild atherosclerotic disease, stenosis 0-25%.

LEFT CAROTID BIFURCATION:

Atherosclerotic disease, 70% stenosis.

All measurements of ICA stenoses were calculated based on NASCET criteria referencing the normal distal ICA diameter.

CT HEAD:

Intracranial: No mass effect or midline shift. No CT evidence of acute ischemia or infarction. No abnormal extra-axial collections. No acute intracranial hemorrhage. Negative for hydrocephalus. The basilar cisterns and foramen magnum are preserved.

Atrophy/white matter: Age appropriate cerebral volume and white matter.

Scalp and soft tissues: No acute findings.

Orbits (visible): Thinning of bilateral ocular lenses.

Sinuses and mastoids: Clear sinuses. Clear mastoid air cells.

Bones: Unremarkable calvarium and other visualized bony structures.

CTA HEAD:

Intracranial arteries:

Internal carotid arteries: Moderate atherosclerotic disease seen.

Anterior cerebral arteries: Widely patent.

Middle cerebral arteries: Widely patent.

Posterior circulation: Widely patent.

Circle of Willis: Widely patent.

Brain parenchyma: Unremarkable arterial phase, postcontrast appearance.

Extra-axial structures: Unremarkable.

Additional comments: None.

IMPRESSION:

1. 70% stenosis of the left internal carotid artery at the carotid bifurcation.
2. No evidence of intracranial aneurysm, dissection, or flow-limiting stenosis.
3. No evidence of acute intracranial abnormality.

4. Air-fluid levels in the left maxillary sinus. Correlate for acute sinusitis.
