Subjective:

Patient is here for follow-up

Anxiety
On Effexor XR 150 mg daily
BuSpar 7.5 mg twice daily was added at last visit. She cannot tell a difference. Denies side effects.
Had concerns about possible ADHD and was sent to mending minds for evaluation but patient states they do not take her insurance? She does not seem interested in pursuing eval at this time.

Hypertension
On amlodipine and lisinopril

BMI 31. States that she eats "too much". States she is planning to go back to work and this should help with increasing her physical activity.

Patient states her son has mentioned that she has occasional wheezing with activity. She denies chronic cough. Never smoker.

Scheduled to have EGD and endoscopic mucosal resection next month for duodenal polyp and Dr. Aburajab is requesting preoperative clearance. Patient reports that she saw a cardiologist in Logansport a few years ago but is not currently seeing 1.

Carotid stenosis. Follows with vascular

Review of systems negative except as otherwise noted.

Monitoring and Evaluation

Conducted initial nutrition consultation via telephone with the patient. The patient reports that her son requested a referral to a registered dietitian. She expresses a desire for weight loss. The patient follows a meat-free diet but admits to consuming high-sugar foods.

She previously engaged in regular walking up to 2 miles daily but discontinued due to chronic joint pain, initially suspected to be gout; however, the patient doubts this diagnosis as the pain is persistent and unremitting.

Reviewed current dietary habits and discussed modifications to support nutritional goals.

Recommendations to reduce sodium intake:

- Prepare home-cooked meals using fresh ingredients.
- Select foods and condiments containing 200 mg of sodium or less per serving.
- If fatigued, opt for frozen or packaged meals with 600 mg or less sodium per serving.
- Read labels carefully to avoid foods exceeding 200 mg sodium per serving, including canned soups, soup mixes, packaged foods, pickled items, sauces, and seasonings.
- Limit or eliminate added salt; use salt-free seasonings such as herbs, spices, lemon juice, and vinegar to enhance flavor.

Note: Some products labeled "low sodium" may contain potassium chloride as a sodium substitute. Review ingredient lists to ensure safety.

General guidelines for kidney health:

- Consume a variety of nutrient-dense (not calorie-dense) foods.
- Choose whole grains and high-fiber options.
- Include a variety of fruits and vegetables daily; potassium levels will guide safe choices.
- Limit intake of foods high in added salt, sugars, and fats.
- Select lean protein sources such as chicken, turkey, fish, or plant-based proteins; avoid fried items.
- Maintain adequate hydration, prioritizing water intake with a goal of 64-80 ounces daily.

Reviewed goals together.

Tension Headache

A muscle tension headache is a very common cause of head pain. It's also called a stress headache. When some people are under stress, they tense the muscles of their shoulder, neck, and scalp without knowing it. If this tension lasts long enough, a headache can occur. A tension headache can be quite painful. It can last for hours or even days.

Home care

Follow these tips when caring for yourself at home:

- Don't drive yourself home if you were given pain medicine for your headache. Instead, have someone else drive you home. Try to sleep when you get home. You should feel much better when you wake up.
- Put heat on the back of your neck to help ease neck spasm.
- Drink only clear liquids or eat a light diet until your symptoms get better. This will help you avoid nausea or vomiting.

How to prevent headaches

- Figure out what is causing stress in your life. Learn new ways to handle your stress. Ideas include regular exercise, biofeedback, self-hypnosis, and meditation. Talk with your health care provider to find out more information about managing stress. Many books and digital media are also available on this subject.
- Take time out at the first sign of a tension headache, if possible. Take yourself out of the stressful situation. Find a quiet, comfortable place to sit or lie down and let yourself relax. Heat and deep massage of the tight areas in the neck and shoulders may help ease muscle spasm. You may also get relief from a medicine like ibuprofen or a prescribed muscle relaxant.

Follow-up care

Follow up with your health care provider if the headache doesn't get better within the next 24 hours. Talk with your provider if you have frequent headaches. He or she can figure out a treatment plan. Ask if you can have medicine to take at home the next time you get a bad headache. This may keep you from having to visit the emergency department in the future. You may need to see a headache specialist (neurologist) if you continue to have headaches.

When to seek medical advice

Call your health care provider right away if any of these occur:

- Your head pain gets worse
- Your head pain doesn't get better within 24 hours
- You aren't able to keep liquids down (repeated vomiting)
- Fever of 100.4°F (38°C) or higher, or as directed by your health care provider
- Stiff neck
- Extreme drowsiness, confusion, or fainting
- Dizziness or dizziness with spinning sensation (vertigo)
- Weakness in an arm or leg or one side of your face
- You have difficulty speaking or vision
- Your vision changes
